Hello Members, markets still wobbly. .but overall still hangs in sideways mode on larger time frame. We hold 4 positions with RR stopped out - depend on the broker since it traded around SL. If you are stopped out, we will look for new entry after we see more upside. Other 4 positions are still ok. NFLX and Arm still in solid gains, Excl still in red and Tsla as well...we will continue to search for new positions and manage the existing ones
